Summary

Backend developer working with Java and Python since 2017. I build REST APIs and microservices with Spring Boot, FastAPI and PostgreSQL, and I ran an e-commerce business from 2010 to 2023. Recently I did freelance AI data labelling and evaluation work and built small projects on event-driven services (Kafka) and LLM tool calling. I deliver code with tests and continuous integration (GitHub Actions).

Skills

- **Programming languages:** Java, Python, SQL (basic C# and C++)
- **Frameworks and architecture:** Spring Boot, Spring Data JPA, Hibernate, Spring Cloud Gateway, Eureka, FastAPI, SQLAlchemy, REST APIs, microservices
- **Data and messaging:** PostgreSQL, Redis, Apache Kafka (project level)
- **Infrastructure and tools:** Git, GitHub, GitHub Actions, Docker; AWS and Kubernetes (about one year each)
- **Testing:** JUnit, Mockito, pytest, unittest
- **AI:** LLM tool calling, guideline retrieval (BM25), output validation
- **Spoken languages:** Turkish (native), English (B1–B2, strong technical reading)

Experience

AI data labelling and evaluation (freelance, part-time, remote) · Alignerr · 2026 – present
- Labelled and evaluated AI training data against detailed guidelines.
- Focused on accuracy, consistency and a low rework rate.

Founder and operator · E-commerce business, İzmir · 2010 – 2023
- Led digital transformation and marketplace operations, coordinating the team and the order flow.

Java developer and backend test analyst (remote) · GoodBarber · 2017 – 2018
- Built Java-based application components and tested backend software.

Projects

payments-kafka-demo · github.com/endlessloop88/payments-kafka-demo · Java 17, Spring Boot, Apache Kafka, JUnit
- Payment events are keyed by account id and written to 3 partitions; a consumer group updates balances.
- A duplicate event is applied once (idempotent consumer); a failing event goes to a dead-letter topic after two retries.
- 15 tests, including an end-to-end test on an embedded Kafka broker.

annotation-quality-api · github.com/endlessloop88/annotation-quality-api · Python, FastAPI, SQLAlchemy, PostgreSQL, Docker, GitHub Actions
- REST API that tracks labelling tasks, submissions and reviews and reports quality metrics such as approval and correction rates.
- The submission flow is a state machine (accepted, needs correction, rejected); pytest tests and CI.

annotation-review-agent · github.com/endlessloop88/annotation-review-agent · Python
- Skeleton of an LLM agent that reviews labelling submissions against written guidelines: tool calling, BM25 guideline search, output validation (schema, grounded citations, PII masking).
- Offline demo that needs no API key, 42 unit tests, CI on Python 3.10 and 3.12.

Patent Agent · github.com/endlessloop88/patent-agent-backend · Java, Spring Boot, H2
- RESTful backend for patent management and search.

Microservice work (Modupay, TicketFlow) · Java, Spring Boot, Spring Cloud Gateway, Eureka, Redis
- Order service and API gateway with service discovery (Eureka); Redis/Redisson distributed locking against double booking under high traffic, and Java 21 virtual threads experiments.

Education

- **M.Sc., Artificial Intelligence** · Global College of America (distance) · 2026 – ongoing
- **B.Sc., Computer Engineering** · Intl Dublin University · 2024 – 2026

Certificates and training

- CS50's Introduction to Computer Science · Harvard (online) · 2026
- Cyber security specialist training · PGA Academy · 2024 – 2025
- White-hat (ethical) hacker training · PGA Academy · 2024
